

## MISCELLANEA

### *PLASMODIUM REICHENOWI*

BLACKLOCK AND ADLER, 1924

This name was given by Blacklock and Adler to a crescent-forming parasite of the chimpanzee found by them in Sierra Leone ; they concluded as the result of cross infection experiments that it was not identical with *P. falciparum*. From a personal communication of Dr. Swellengrebel to Dr. Bagshawe, Director of the Tropical Diseases Bureau, it appears that Swellengrebel and Ihle have previously applied the name *Laverania reichenowi* to this parasite in 1922, on page 12 of 'Sluiter, Swellengrebel and Ihle. De dierlijke parasieten van den mensch en van onze huis dieren, 3d. Ed. Amsterdam, 1922. Scheltema and Holkema.'

B. BLACKLOCK.
